

PRODUCT BULLETIN

Yale Mantis 3

Non-Handed Composite Door Lock

Mantis 3 offers a solution for composite or flush timber doors where a roller cam is not required, or cannot be accommodated. The combination locking points feature only the hook and tapered deadbolt, and work with individual adjustable keeps.

The unsprung lock is supplied in a choice of 35 or 45mm backsets, both with a 20mm stainless steel face plate. The 20mm face plate is radiused at both ends, so the groove need not be run the full length of the door edge.

If preferred, fabricators can opt for the 44mm aluminium faceplate option that completely spans the edge of the door leaf.

Benefits at a Glance:

- 92/62 PZ allows lever/lever or lever/pad operation
- Hook/deadbolt combination locking points
- 25mm 'deep throw' hooks
- Choice of 35 or 45mm backsets
- Choice of 20 or 44mm face plates
- Radiused face plate (20mm only)
- Adjustable individual keeps
- Easy latch reversal (from front)
- 10 Year Mechanical & Surface guarantees
- Security Guarantee

VBH codes and technical details are shown overleaf.
