

# greenteQ Vistafold Elite Bi-Fold Door Hardware

5  
Years

For extra-smooth operation of wooden bi-fold doors and windows

greenteQ Vistafold Elite has been developed specifically for standard 4" (100mm) wooden bi-fold doors and windows.

The system gives the option of hanging from the top with a guide at the bottom or using bottom rollers with top guides. Both options allow for sash weights of up to 90KG.

Vistafold Elite is available in antique brass, antique stainless, gloss white and satin black finishes.

The product is exceptionally durable. Its rugged powder coated high grade aluminium construction and nylon wheels make Vistafold suitable for installations in challenging environments, including coastal situations. The system is guaranteed for a full 5 years.

Intermediate locking points are secured either by colour-matched flush bolts or, on 56mm doors, the Vistalock Break Point Lock can be fitted. This is used with a greenteQ intermediate handle to project locking rods into the head and sill with a 180° turn.

The main passage leaf can be secured using a greenteQ Q-Bolt or iQ multipoint door lock, used in conjunction with greenteQ Alpha or Coastline handle sets, and a greenteQ Euro profile cylinder such as the Orion TS007 3 star.

iQ locks will allow the door to be connected to a new or existing smart home network via a Kubu hub. This brings a host of benefits to the user, including open/closed/locked status monitoring and a range of security and comfort alerts among others.

## KEY FEATURES AT A GLANCE

- Copes with harsh coastal environments
