greenteQ Alpha Cockspur Handle

greenteQ

Alpha Cockspur

Alpha Cockspur is a simple solution for fabricators and installers who do not require or need to fit a multipoint locking solution (such as a shootbolt or espagnolette). They can suite their outward opening windows with their residential doors, patio doors and tilt & turn windows.

Alpha Cockspur is part of the greenteQ Suite where all products are perfectly colour matched and feature design constants across the range. The grip of Alpha Cockspur is identical to that on the Alpha espagnolette and TBT handles which, in turn, have the same end profile as the Alpha door handle.

The attractive modern styling enables repair and maintenance specialists to give old installations a smart new look simply by replacing the existing old-fashioned cockspur handles.

Alpha Cockspur is available in 2 heights with the 12mm suited to aluminium sections and 21mm being more suited to PVCu window systems.

Benefits at a glance:

- Part of the popular greenteQ Suite of matching window and door furniture
- Low cost handle option where multi-point locking is not required
- Modern styling refreshes tired installations
- 2 versions suit aluminium and PVCu profile systems
- Supplied in individual bags with key and cover cap
- Bags are colour coded blue for LH and red for RH for easy identification on bench or in storeroom or van
- Same key as Alpha Espag handle
- Covered by greenteQ 10 Year performance and surface guarantee
