greenteQ Stainless Steel Pull Handles & Cylinder Rosettes

greenteQ Stainless Steel Pull Handles & Cylinder Rosettes

The market is witnessing an increasing trend towards contemporarily styled composite, aluminium and timber doors, many of which are fitted with key operated or auto locking door locks.

These doors are often fitted with a separate pull handle and cylinder rosette, rather than an all in one lever on backplate.

The greenteQ range offers a selection of attractive pull handles in a matt brushed stainless steel finish, along with aluminium and stainless steel cylinder rosettes in various shapes.

Images of the pull handles can be shown on the reverse. These are available in various lengths.

2 examples of the cylinder rosettes are also overleaf but there are many more to choose from.

Fixing kits for all pull handles must be ordered separately.

VBH item codes for the handles and their relevant fixing kits can be found in the full VBH catalogue.

Full Product Data Sheets in English are available on each product. These detail the various options and can be downloaded from www.greenteQ.info.

greenteQ Stainless Steel Pull Handles and Cylinder Rosettes

Information
